Introduction

The Life Sport Clinic Management System is a modern software solution designed to manage and streamline the operations of physical therapy and rehabilitation clinics. The system allows administrators, physiotherapists, receptionists, and patients to efficiently manage clinic workflows, appointments, patient records, and session tracking. The system improves patient experience, enhances staff efficiency, and provides real-time insights into clinic performance.

Problem Definition

Physical therapy clinics often face challenges such as:

- Manual patient registration and session tracking
- Inefficient scheduling and appointment management
- Limited visibility into patient progress and clinic operations
- Difficulty in monitoring daily attendance and session usage
- Fragmented communication between staff, patients, and administration

The Life Sport Clinic Management System addresses these issues by providing a digital, centralized platform for managing all clinic operations effectively.

Scope

The system includes functionalities for:

- Admin: Manage users, view operational dashboard, monitor clinic performance.
- Receptionist: Register patients, check-in patients, monitor session balances, manage company contracts.
- Physiotherapist: Track patient sessions, create and update treatment notes, manage clinical activities.

- Patient: View session history, scan QR codes for check-in, monitor treatment schedule and notes.
- Scheduler (System): Detect absences, send automated reminders, enforce session limits.

The system covers patient management, appointment scheduling, clinical monitoring, billing, and alerts, ensuring seamless workflow in clinics.

System Architecture

The system architecture follows a role-based access model:

Roles:

- Admin: Full access to dashboards, staff, patients, and clinic metrics
- Receptionist: Patient registration, check-ins, and session monitoring
- Physiotherapist: Clinical management and treatment notes
- Patient: Self-service portal with session tracking and QR-based check-in

Components:

1. Frontend: Web-based GUI for each role (Admin, Receptionist, Physiotherapist, Patient)
2. Backend: REST API endpoints to manage patient records, sessions, and treatment plans
3. Database: Stores user accounts, patient records, session history, QR codes, treatment notes
4. Notification System: SMS reminders for absences and session updates

API URLs

Functionality	Endpoint
Login	/api/login
Register Patient	/api/patient/register
Check-in	/api/patient/checkin
View Dashboard	/api/dashboard
View Patients	/api/patients
View Staff	/api/staff
Generate QR	/api/patient/qrcode
Treatment Notes	/api/patient/notes

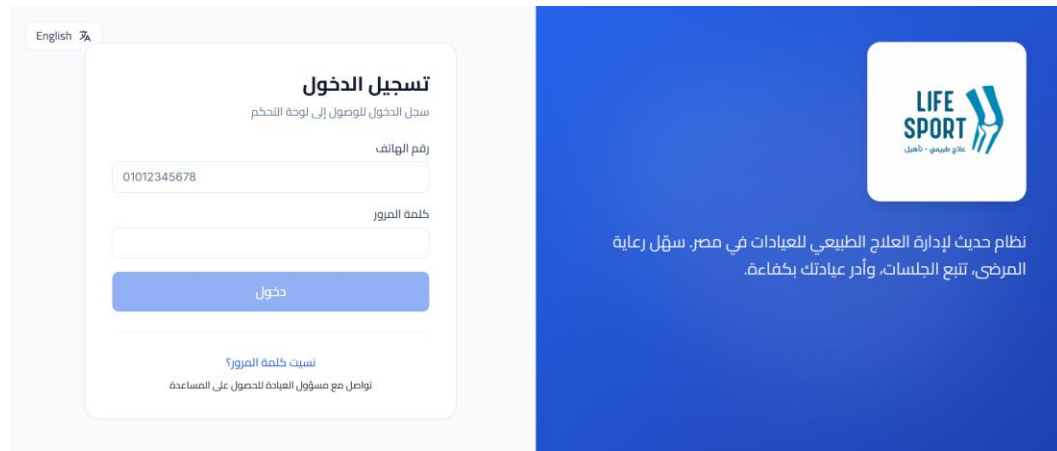

Tools and Technologies

- Frontend: React.js, HTML, CSS, JavaScript
- Backend: Node.js, Express.js
- Database: MongoDB
- Authentication: JWT-based login
- Notifications: Twilio SMS API

- QR Code Generation: qrcode JavaScript library
- Version Control: Git/GitHub
